

AWS IAM Users and Groups Assignment

Problem Statement:

You work for XYZ Corporation. To maintain the security of the AWS account and the resources you have been asked to implement a solution that can help easily recognize and monitor the different users.

Tasks To Be Performed

1. Create 4 IAM users named “Dev1”, “Dev2”, “Test1”, and “Test2”.
2. Create 2 groups named “Dev Team” and “Ops Team”.
3. Add Dev1 and Dev2 to the Dev Team.
4. Add Dev1, Test1 and Test2 to the Ops Team.

Step 1: Create IAM User Dev1

The screenshot shows the AWS IAM console interface for creating a new user. The breadcrumb navigation at the top indicates the path: IAM > Users > Create user. On the left, a vertical progress bar shows four steps: Step 1 (Specify user details, currently active), Step 2 (Set permissions), Step 3 (Review and create), and Step 4 (Retrieve password). The main content area is titled 'Specify user details' and contains a 'User details' section. In this section, the 'User name' field is filled with 'Dev1'. Below this, there is a checkbox labeled 'Provide user access to the AWS Management Console - optional', which is checked. A note explains that users with 'S3ReadOnlyAccess' permissions can use the same console credentials for programmatic access. Under the 'Console password' section, there are two options: 'Autogenerated password' (unchecked) and 'Custom password' (checked). The 'Custom password' option has a text input field containing eight asterisks. Below the input field, there are two bullet points: 'Must be at least 8 characters long' and 'Must include at least three of the following mix of character types: uppercase letters (A-Z), lowercase letters (a-z), numbers (0-9), and symbols ! @ # \$ % ^ & * () _ + - { } | ' '. There is also an unchecked 'Show password' checkbox. At the bottom of the 'User details' section, there is a checked checkbox labeled 'Users must create a new password at next sign-in - Recommended', with a note that users will automatically get the 'IAMUserChangePassword' policy. A blue box at the very bottom contains an information icon and text: 'If you are creating programmatic access through access keys or service-specific credentials for AWS CodeCommit or Amazon Keyspaces, you can generate them after you create this IAM user.' with a 'Learn more' link. At the bottom right of the form, there are 'Cancel' and 'Next' buttons.

Step 2: Set Permissions for IAM User

The screenshot shows the AWS IAM console interface for the 'Create user' process, specifically the 'Set permissions' step. On the left, a progress bar indicates four steps: 'Specify user details', 'Set permissions' (current), 'Review and create', and 'Retrieve password'. The main content area is titled 'Set permissions' and includes a sub-header 'Permissions options'. There are three radio button options: 'Add user to group' (selected), 'Copy permissions', and 'Attach policies directly'. Below these is a section 'Get started with groups' with a 'Create group' button. At the bottom right, there are 'Cancel', 'Previous', and 'Next' buttons. The footer contains links for CloudShell, Feedback, Console Mobile App, and copyright information.

Step 1: Specify user details
Step 2: **Set permissions**
Step 3: Review and create
Step 4: Retrieve password

Set permissions

Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. [Learn more](#)

Permissions options

- ☒ **Add user to group**
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.
- ☐ **Copy permissions**
Copy all group memberships, attached managed policies, and inline policies from an existing user.
- ☐ **Attach policies directly**
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.

Get started with groups
Create a group and select policies to attach to the group. We recommend using groups to manage user permissions by job function, AWS service access, or custom permissions. [Learn more](#) [Create group](#)

► **Set permissions boundary - optional**

[Cancel](#) [Previous](#) [Next](#)

Step 3: IAM User Created Successfully

The screenshot shows the AWS IAM console interface for the 'Retrieve password' step. A green success message at the top states 'User created successfully' and provides a 'View user' button. The progress bar on the left shows 'Set permissions' as the previous step and 'Retrieve password' as the current step. The main content area is titled 'Retrieve password' and includes a sub-header 'Console sign-in details'. It displays the 'Console sign-in URL' as 'https://199570264722.signin.aws.amazon.com/console', the 'User name' as 'Dev1', and the 'Console password' as a masked string with a 'Show' button. At the bottom right, there are 'Cancel', 'Download .csv file', and 'Return to users list' buttons. The footer is identical to the previous screenshot.

User created successfully
You can view and download the user's password and email instructions for signing in to the AWS Management Console. [View user](#)

Step 1: Specify user details
Step 2: Set permissions
Step 3: Review and create
Step 4: **Retrieve password**

Retrieve password

You can view and download the user's password below or email users instructions for signing in to the AWS Management Console. This is the only time you can view and download this password.

Step 4: Users List Verification

The screenshot shows the AWS IAM console with the 'Users' page selected. A green notification banner at the top states 'User created successfully' with a 'View user' button. Below this, the 'Users (5)' section is displayed, showing a list of five users: Dev1, Dev2, DevORavi, Test1, and Test2. The table columns include checkboxes, User name, Path, Groups, Last activity, MFA, Password age, Console last sign-in, Access key ID, Active key age, and Access key status. The footer of the console shows the CloudShell, Feedback, and Console Mobile App links, along with the copyright notice for Amazon Web Services, Inc.

	User name	Path	Groups	Last activity	MFA	Password age	Console last sign-in	Access key ID	Active key age	Access key status
☐	Dev1	/	0	-	-	6 minutes	-	-	-	-
☐	Dev2	/	0	-	-	5 minutes	-	-	-	-
☐	DevORavi	/	0	10 days ago	-	12 days	10 days ago	-	-	-
☐	Test1	/	0	-	-	5 minutes	-	-	-	-
☐	Test2	/	0	-	-	4 minutes	-	-	-	-

Step 5: Create DevTeam Group and Add Users

The screenshot shows the 'Create user group' page in the AWS IAM console. The 'Name the group' section has 'DevTeam' entered in the 'User group name' field. The 'Add users to the group - Optional (2/5)' section shows a list of users with checkboxes. The 'Attach permissions policies - Optional (1/1147)' section shows a search for 'AmazonEC2FullAccess' with a dropdown set to 'All types' and a '1 match' result.

	User name	Groups	Last activity	Creation time
☒	Dev1	0	-	1 hour ago
☒	Dev2	0	-	59 minutes ago
☐	DevORavi	0	10 days ago	12 days ago
☐	Test1	0	-	58 minutes ago
☐	Test2	0	-	58 minutes ago

	Policy name	Type	Used as	Description
☒	AmazonEC2FullAccess			

Step 6: User Groups Created Successfully

The screenshot shows the AWS IAM console's 'User groups' page. A green notification banner at the top states '5 users added to this group.' The main heading is 'User groups (2)' with an 'info' icon. Below the heading is a description: 'A user group is a collection of IAM users. Use groups to specify permissions for a collection of users.' There is a search bar and navigation controls. The table below lists the groups:

☐	Group name	Users	Permissions	Creation time
☐	DevTeam	2	Defined	3 minutes ago
☐	OpsTeam	3	Defined	2 minutes ago

The left sidebar shows the 'Access Management' section with 'User groups' selected. The bottom of the console shows the 'CloudShell', 'Feedback', and 'Console Mobile App' links, along with the copyright notice '© 2026, Amazon Web Services, Inc. or its affiliates.' and links for 'Privacy', 'Terms', and 'Cookie preferences'.

Step 7: Verify Users in DevTeam Group

The screenshot shows the AWS IAM console's 'DevTeam' group details page. The 'Summary' tab is active, displaying the group name 'DevTeam', creation time 'April 21, 2026, 16:40 (UTC+05:30)', and ARN 'arn:aws:iam:199570264722:group/DevTeam'. There are 'Delete' and 'Edit' buttons. The 'Users (2)' tab is also visible, showing a list of users in the group:

☐	User name	Groups	Last activity	Creation time
☐	Dev1	2	None	1 hour ago
☐	Dev2	1	None	1 hour ago

The left sidebar shows the 'Access Management' section with 'User groups' selected. The bottom of the console shows the 'CloudShell', 'Feedback', and 'Console Mobile App' links, along with the copyright notice '© 2026, Amazon Web Services, Inc. or its affiliates.' and links for 'Privacy', 'Terms', and 'Cookie preferences'.

Conclusion

Successfully created IAM users and groups in AWS IAM and assigned users to their respective groups according to the given requirements.
